

Automatically create a better living environment!

■ Comfort

The advanced automation functions of the Telis 6 Chronis RTS timer allow you to create comfortable environments without lifting a finger. Open all the motorized window coverings in your home in the morning, close them half way in the afternoon and close them completely in the evening without having to think about it.

■ Energy Savings

The twilight function of the Telis 6 Chronis RTS timer ensures optimal use of your motorized window coverings. This option enables closure times to automatically adjust to the time of sunset, which minimizes energy loss and also insulates the home.

■ Vacation

The Telis 6 Chronis RTS timer also features a random function, which is a valuable asset during prolonged absences. This makes the home appear occupied, by operating the motorized products at random times throughout the day, giving you peace of mind.

Modern aesthetic quality

The clear and functional design provides a high-quality image with exceptional ease of use.

- Soft, rounded shape that's comfortable to hold
- Large screen for improved visibility
- Ergonomically-designed buttons
- Discreet wall clip (optional)

Exclusive to Somfy

The "my" button

Use this button to set your favorite position for an individual motorized application or a group of motorized applications. Set it once and access it instantly.

■ Harmony

A choice of two finishes to match any décor.

Pure

A subtle tone that blends seamlessly with all interiors.

1805217

Silver

A modern look for sophisticated styles.

Telis 6 Chronis RTS

Manual Mode

The centralization function

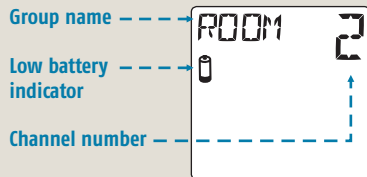

- Six channels to control six groups of applications

Telis 6 Chronis RTS can be used to control groups of motorized products in the home from a centralized location: interior window coverings, awnings, exterior screens, rolling shutters, etc.

- Name groups to easily find them again

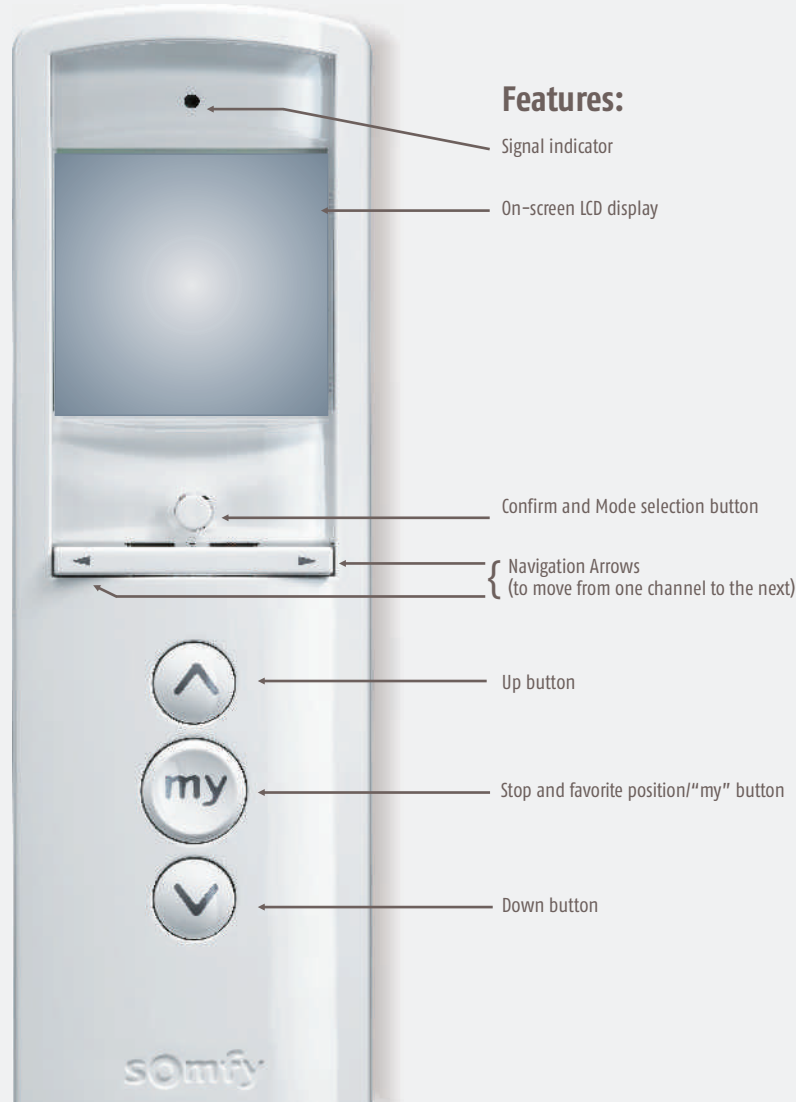

Users can name each group on the screen (five alphanumeric characters) and assign a channel to each group.

In manual mode, the programmable clock is disabled.

Two operating modes... Two main functions...

Greater clarity means greater time savings!

Automatic Mode

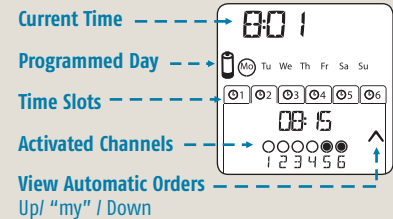

The clock function

- Each week can be programmed day by day

In automatic mode, the clock manages each zone of the home, the movements of groups of motorized products. Each day of the week can be programmed separately.

- Six time slots per day

Users can easily program up to six time slots in any given day. Each time slot applies the same command to all selected groups.

For Example:
In this scenario, the current time is 8:01. The second action of the day will automatically occur at 8:15 and raise the motorized shades on channels 5 and 6.
